1. Introduction

1.1. Purpose and scope of document

The purpose of this Test Report is to give a clear overview of the system testing that was carried out, including what was tested, how testing was done, and what the results were. This report is intended for customers to understand the current quality of the product.

The following areas were tested:

- GUI
- Functional requirements
- Installation and general behaviour
- Budgeting and available-funds logic

Testing was done manually using predefined test cases on iOS devices, an Android emulator. Testing web platform was skipped since functionalities could not be implemented in time.

A total of 56 test cases were executed. Testing took place in 14.4.2026-28.4.2026 not including feature testing during development earlier in the project and was performed by the project team.

Test data was created with help of AI to create usual income and expenses for budgeting.

Results:

- 42 tests passed
- 13 tests failed
- 1 test not done since feature not implemented in this version.

Out of 56 tests, 42 passed and 13 failed. Key issues include UI display problems on iOS and Android, incorrect calculation logic for first usage day, incomplete translations. All defects remain open.

1.2. Product and environment

Product is EVA MyBudget budgeting app and environment is Android and IOS mobile devices. Web platform was planned but we could not implement it in time.

1.3. Project constraints related to testing

There was no constraints from customer for testing related to technologies, standards, confidentiality, cybersecurity, user testing or licencing since its open-source project. Biggest difficulty related to testing was this project was very iterative by nature so test requirements needed constant updates weekly.

1.4. Definitions, abbreviations and acronyms

- **Test**
Verification of a single requirement, feature, or functionality
- **System testing**
Testing of the complete application.
- **Manual testing**
Testing performed without automation tools.
- **Automated testing**
Testing performed using automated tools or scripts.
- **Acceptance testing**
Testing and review performed by the customer to approve the system.

2. Testing process

The project follows a coding style with tab-based indentation (width 4), single quotes, and organized imports. Linting with recommended rules (including enforced use of arrow functions) was applied, and coding style was checked in pull requests using automated Biome linter checks.

2.1. General approach

Testing was mainly performed at the system level using manual testing with predefined test cases. The focus was on verifying the functionality, user interface, installation, and budgeting logic of the application across different platforms.

Unit and integration testing was mostly done by developers working on the features and after it was accepted to the update, regression testing was done to make sure everything works on system level.

We provided customer with updated version of the software weekly, and they conducted testing by using the app and providing us feedback in weekly meetings. And on last weeks they gave us acceptance feedback on latest versions from using the latest version of the software.

usability assessment was included through GUI testing (e.g. layout, responsiveness, and interactions), but no separate analytical usability study was performed.

There is no defined error classification system (such as minor/major), But in meetings with customer we defined problems with budgeting and funds calculations are most major and UI problems are in less priority.

2.2. Testing roles

List the roles of personnel related to testing. Remember other parties as well (e.g. customer, end-users).

- Test manager and system testing done by Riku Puolanne.

- Code reviews in pull requests for mistakes, UI and backend testing and development done by Otso Rouhiainen and Lassi Säike.
- UI testing and development done by Mikko Rajakorpi and Elias Poikonen
- Backend testing and development by Tuomas Kiiskinen.
- Backend and UI testing and development by Matias Piipponen
- Customer feedback from using the app and requirement by Maija Nykänen and Saana Laukkarinen

2.3. Test schedule

Our testing schedule was to do feature level unit testing when development was started and we planned System testing to start at 29.3.2026, but it started some time at 14.4.2026 later since we did some major updates to UI and functionalities so we had to update lot of the system testing test cases. That left us with less time to fix found problems.

2.4. Test documentation

Test log was used at the beginning of testing, but it was later left mostly unused when system testing started. During system testing, results and findings were instead documented in the system test report, which served as the main source for recording test outcomes and defects.

3. Testing Tools

The project uses several tools to support testing and code quality. Automated checks are executed through GitHub Actions when a pull request is created, or code is pushed to the main branch.

The automated checks include:

- **Build checks**, which verify that the project compiles successfully.
- **EAS checks**, which validate the Expo build configuration.
- **Linters checks** using **Biome**, which enforce coding standards such as tab indentation, single quotes, and organized imports.

Testing was mostly done on Expo Go on IOS devices and Android emulators.

4. Tests and results

4.1. System testing

In the end we only did system because we wanted to be sure how the app works as a whole and what are the the issues we could not fix in time.

In system testing we did 56 tests and 42 tests passed and 13 tests failed and in these there was lot of repetition in calculation for example with budget incomes and expenses the same problems occurred in many different test cases. 1 feature we did not test since that feature was not implemented.

Key issues were UI display problems on iOS and Android, incorrect calculation logic for first usage day, incomplete translations. All defects remain open.

Testing was all manual testing..

4.2. Acceptance testing

Done by customer reviewing our test results and using the latest version of the app. In our last customer meeting, we were informed that they were happy with our progress and they accepted the work we had done.

4.3. Test results

ID	Test Type
M	Manual Test
A	Automated Test

Installation and General Application Behaviour

Purpose

Verify that the application installs successfully and functions across different platforms

Test Type	Test	Tested (Y/N)	Result (OK, No + Comments)	Test Platform(s)
M	Verify that the app installs successfully and works on the latest Android OS. Installed as an “.apk” file, bypassing the Play Store.	Y	OK	3
M	Verify that the app works on the latest iOS version. Tested using Expo Go only. Cannot test “.ipa” file installation without a paid Apple Developer account.	Y	OK	1
M	Verify that the app works on the previous Android and iOS OS versions.	Y	OK. Tested on Android 16 and iOS 18 via Expo Go.	2, 4
M	Verify that the app launches without crashes.	Y	OK	1, 2, 3
M	Verify that the app closes gracefully.	Y	OK. The app has no dedicated close button, but exiting via the phone's native gesture or switching tabs causes no issues or slowdowns.	1, 2, 3, 4

User Interface

Purpose

Verify that the UI layout consistency, accessibility, touch interactions, button and link functionality, and responsiveness match the design and function normally.

Test Type	Test	Tested (Y/N)	Result (OK, No + Comments)	Test Platform(s)
M	Verify that the layout does not break when the phone font size is changed.	Y	NO. On iOS devices with the largest font size: - Names of already created income and expense items disappear from the budget page. - “Previous” and “Next” button labels wrap to two lines untidily. - On the available-funds page, “money in account” and “available funds/day” are cut off if amounts are too large. - In the add income/expense window, the date field wraps to two lines. - The second welcome screen is slightly cut off at the bottom. - In Settings, the period editing date wraps to two lines and the date edit button extends off screen. - On the add/edit income or expense page, the event end date wraps to two lines and the event start date is slightly cut off. On Android: - The “Continue” button on the second welcome screen is cut off at the bottom, preventing navigation forward. - The close button of the info dialog opened via the piggy bank icon scales poorly. - On the edit budgeted event page, dates scale poorly and wrap to two lines. - In the edit event window on the available-funds page, input field labels are cut in half. - In the add new budgeted income/expense window, dates scale poorly and wrap to two lines. - The header is cut off in the budget monthly view. - On the budget edit page, already-budgeted text scales too small and “Previous” and “Next” buttons wrap to two lines.	1, 2, 3

M	Verify that the layout does not break when both screen size and font size are changed.	Y	Problems below appear with biggest scaling sizes. - Part of the second welcome screen is cut off at the bottom. - The “Edit Balance” button label is cut off. - On the edit budget page, already-budgeted text scales too small and budgeted elements slightly overlap the Income/Expenses labels. - In the add income/expense window, input field labels are cut off and the date wraps to two lines. - On the budget edit expenses page, the “Done” button scales too large and wraps to two lines. - In the add budgeted income/expense window, multiple elements are cut off and scale poorly. - On the available-funds page, “money in account” and “available funds/day” are cut off if amounts are too large. The date also wraps to two lines. - In the budget monthly view, the header is cut off and amounts are cut off if too large.	3
M	Verify that all icons and buttons are displayed correctly as per the UI prototype.	Y	OK	1, 2, 3
M	Verify that fonts, spacing, and alignment are consistent.	Y	OK	1, 2, 3
M	Verify that navigation works (tabs, menu, back button).	Y	OK	1, 2, 3
M	Verify that the currently active page is highlighted in the bottom navigation bar.	Y	OK	1, 2, 3
M	Verify that the UI contains no overlapping or broken content.	Y	NO. With the largest font and screen size, element scaling breaks. Described in more detail in the earlier test above.	1, 2, 3
M	Verify that no significant lag or freezing occurs.	Y	OK	1, 2, 3
M	Verify that the UI translates correctly under different language settings.	Y	NO With English setting: - In the edit balance window, the input field label “current adjusted balance” is not translated. With Finnish setting: - The add income or add expense window title	1, 2, 3

			is not translated and appears in English. - The Continue button on the welcome page is not translated and appears in English. - On the budget page monthly data, the text inside the planned income and expense buttons is not translated when there are no plans. - On the accounting page in the monthly view, the "(planned)" label after budgeted expenses is not translated. - In the budget monthly view, the planned income and expense buttons are not translated.	
M	Verify that when the app is opened for the first time, the "Welcome" page is shown, containing: - "EVA MyBudget" heading - "Supporting your financial well-being" text - Piggy bank icon - "Let's start!" button When "Let's Start!" Button is pressed: - "Welcome to EVA MyBudget" heading - Text describing the purpose of the application - Back button in the top bar - "Continue" button	Y	OK	1, 2, 3
M	Verify that the home page displays: - "EVA MyBudget" heading - "Supporting your financial well-being" text - Piggy bank icon ja question mark button - Current status and period duration - Available funds/day - Current balance - "Edit Balance" button	Y	OK	1, 2, 3

	- "Add Income/Expense" button If a budget has not yet been created: - Instruction text for creating a budget - Input field - "Create Budget" button Pressing the question mark button opens: - A dialog with help text and a close button			
M	Verify that the available-funds page displays: A box containing: - "Daily situation" heading - Available funds/day - Account balance status - Date - Current period - Calendar button and arrows to change the day - "Add income/expense" buttons Below the box: - Monthly view showing daily income/expenses	Y	OK	1, 2, 3
M	Verify that when the budget page is opened, it displays: - "Edit Budget" button - Years listed in the view Clicking a year in the year view opens: - <year> and a back button in the top bar - Monthly view showing the months of the year and the remaining balance after budget income and expenses. Month background turns red if negative and green if positive. Pressing a month in the monthly view opens: - Back button at the top and <month> <year> (budget) text - Buttons to view planned expenses and income for the month.	Y	OK	1, 2, 3
M	Verify that the accounting page opens with: - A list of years Pressing a year opens: - Back button at the top and <year> text - Monthly view showing the months of the year	Y	OK	1, 2, 3

	and the balance after income and expenses. Month background turns red if negative and green if positive. Pressing a month in the monthly view opens: - Back button at the top and <month> <year> text. - Buttons to view actual income and expenses.			
M	Verify that the settings page contains: - A button to change the language setting - A button to change the available-funds period length Pressing the language button opens a dialog containing: - Heading "Language" - Finnish and English buttons and an indicator showing the selected language. Pressing the period button opens a dialog containing: - Heading "Timeframe" - Period start text, date, and a calendar icon to change the date. - Period length text with an input field for a number and a dropdown to select days, weeks, months, or years. - Cancel and Save buttons	Y	OK	1, 2, 3
M	Verify that pressing the Edit Balance button opens a dialog showing: - "Update account balance" Heading - Current balance - Input field - Balance change via input field - Cancel and Save buttons.	Y	OK	1, 2, 3
M	Verify that pressing the Add Income/Expense button opens a dialog containing: - "Add Income/Expense" heading	Y	OK	1, 2, 3

	- Name input field - Amount input field - Category add button and existing categories as buttons (left unimplemented but still visible on the page) - Date and a calendar button next to it to change it - Cancel and Add buttons			
M	Verify that pressing the Edit Budget button opens a page containing: - Back button at the top - Budget editing progress indicator at the top - "Edit budget" Heading - Income / expenses listed - Edit button for income and expenses - + button to create a new income or expense item - Next and Previous buttons at the bottom of the income step. - Done and Previous buttons at the bottom during the expenses step. Pressing the Edit Income/Expenses button opens a dialog containing: - "Edit item" Heading - Delete button to remove the income/expense item - Name input field - Amount input field - Event start text, date, and a calendar button to change it - Event recurrence toggle button and recurrence selection - Event end button, date, and a calendar button to change it. - Save and Cancel buttons + add income/expense button opens a dialog containing: - Same as the Edit Income button, except the heading is "Add New Event", the Delete button is removed, and the Save button is replaced with an Add button.	Y	NO. "Edit budget" heading is "Create budget"	1, 2, 3

Functional Testing

Purpose

Verify that all input- and button-related functions work as designed.

Test Type	Test	Tested (Y/N)	Result (OK, No + Comments)	Test Platform(s)
M	Verify that all buttons and links work as designed.	Y	OK	1, 2, 3
M	Verify that data is saved and updated correctly.	Y	NO, -Income and expenses from the first day of use are not updated in the available-funds view. Budgeted items do not appear for the same month until a variable expense and income have been added.	1, 2, 3
M	Verify that error messages appear when needed and are clear and precise.	N	Error messages have not been implemented. The app does not allow amounts to be entered with incorrect characters or returns 0 if an invalid value is entered in the input field.	
M	Test input edge cases (empty fields, long inputs, numbers with sign characters, letters, special characters).	Y	NO. The Edit Balance dialog only allows whole numbers; cents cannot be entered. On Android, it is possible to set the balance to a negative value.	1, 2, 3
M	Verify that the keyboard opens and closes correctly and does not remain visible on any page requiring text input.	Y	OK	1, 2, 3
M	Verify that the user does not accidentally lose progress when switching pages or unintentionally delete anything. The user should be warned.	Y	NO, no warning given when deleting budgeted incomes and expenses.	1, 2, 3

Budgeting and Available-Funds Logic

Purpose

Verify that the app's budget and available-funds calculation function correctly.

Test Type	Test	Tested (Y/N)	Result (OK, No + Comments)	Test Platform(s)
M	Verify that adding income and expenses to the annual budget works. Note: Only non-signed numbers without letters are allowed. For income, an average is calculated, so the amount may differ slightly in the budget monthly view if income and expenses are equal.	Y	OK	1, 2, 3
M	Verify that removing income and expenses from the annual budget works.	Y	OK	1, 2, 3
M	Verify that editing income and expenses in the annual budget works. Note: Only non-signed numbers without letters are allowed.	Y	OK	1, 2, 3
M	Verify that the annual budget is calculated by calendar month.	Y	OK	1, 2, 3
M	Verify that the user can view a visualisation of the annual budget by year or by month.	Y	OK	1, 2, 3
M	Verify that in the annual budget monthly view, months where income exceeds expenses are shown with a green background.	Y	OK	1, 2, 3
M	Verify that in the annual budget monthly view, months where expenses exceed income are shown with a red background.	Y	OK	1, 2, 3
M	Verify that income added to the annual budget is reflected in the available-funds view.	Y	NO. Not visible on the first day of use. Budgeted items only start appearing from the next month unless a variable income or expense has been added before the month changes in the available-funds view.	1, 2, 3
M	Verify that expenses added to the annual budget are reflected in the available-funds view.	Y	NO. Not visible on the first day of use. Budgeted items only start appearing from the next month unless a variable income or expense has been added before the month changes in the available-funds view.	1, 2, 3
M	Verify that the user can add recurring income to repeat daily, monthly, annually, or with a	Y	OK	1, 2, 3

	custom interval (e.g. 20 days). Recurring income requires a payment date.			
M	Verify that the user can add recurring expenses to repeat daily, monthly, annually, or with a custom interval (e.g. 20 days).	Y	OK	1, 2, 3
M	Verify that only income items with a payment date are automatically added to the available-funds view.	Y	OK	1, 2, 3
M	Verify that only expense items with a due date are automatically added to the available-funds view.	Y	OK	1, 2, 3
M	Verify that variable expenses are not automatically transferred to the available-funds view; they can be added manually for the day the expense is paid.	Y	OK	1, 2, 3
M	Verify that adding income to the available-funds view works.	Y	OK	1, 2, 3
M	Verify that adding expenses to the available-funds view works.	Y	OK	1, 2, 3
M	Verify that removing income from the available-funds view works.	Y	OK	1, 2, 3
M	Verify that removing expenses from the available-funds view works.	Y	OK	1, 2, 3
M	Verify that editing income in the available-funds view works.	Y	OK	1, 2, 3
M	Verify that editing expenses in the available-funds view works.	Y	OK	1, 2, 3
M	Verify that changes made in the available-funds view are reflected in the day's financial status.	Y	NO. Not visible on the first day.	1, 2, 3
M	Verify that available funds are calculated according to the period length set by the user. The period must be configurable in days, weeks, months, or years.	Y	NO. For an unknown reason, the available-funds period change ignores the number input field and always calculates using 1 day, week, month, or year.	1, 2, 3
M	Verify that the available-funds period length can be changed. When changing the period, the effective start date of the new period must be set.	Y	OK. Editing is possible, but the calculation issue described above persists.	1, 2, 3
M	Verify that the user can see upcoming periods up to one year ahead from the current period.	Y	OK. Can also see further ahead.	1, 2, 3

M	Verify that income added to the available-funds view also appears in the available funds of subsequent periods.	Y	NO. The previously mentioned bug where income from the first day of use is not updated means the amount is also missing from subsequent periods.	1, 2, 3
M	Verify that expenses added to the available-funds view also appear in the available funds of subsequent periods.	Y	NO. The previously mentioned bug where expenses from the first day of use are not updated means the amount is also missing from subsequent periods.	1, 2, 3
M	Verify that the accounting page is updated with correct figures.	Y	OK	1, 2, 3
